

#### Wearable Clinic: Safety Assurance

Ibrahim Habli

ibrahim.habli@york.ac.uk

# (Safety) Benefits

- Digital health technologies matter for patient care
  - Core technology in healthcare
- Al, apps and wearables have a great potential for patient empowerment
  - Proactive care, self-monitoring, planning, realtime data, ...

### Safety Basics

- Digital health failures also matter!
  - Can compromise, under certain conditions, patient safety and lead to harm
- Need to identify and analyse these unsafe conditions
  - Manage them in a Hazard Log
- Justify that what we did is sufficient
  - Captured in a Safety Case

## Safety Challenges

#### **Advantages**

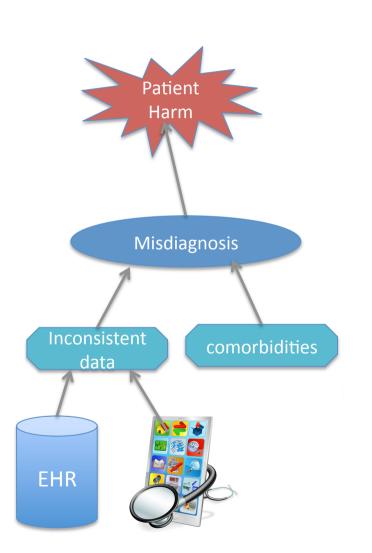

- Cheap(?)
- Commercially available
- Open source
- Reconfigurable
- Intelligent

#### Safety Concerns

- Cheap(?)
- Commercially available
- Open source
- Reconfigurable
- Intelligent

New assumptions about the role of patient and carers No agreement on regulations and standards

- Importance of:
  - Safety by design
  - Through-life

assurance

### Open Source safety Cases

- MediPi: open-source telehealth solution
- MedMinder: self management of medications
- Peripheral Arterial Disease (PAD): selfmanagement and self-test app
